## **Pocket MFSHL**

The HETRONIC Pocket series was designed to serve the basic function market of professional radio remote controls. It's engineered to control a limited number of digital functions without sacrificing safety and reliability. The Pocket offers high reliability, high quality and is competitively priced.

#### The Design:

All Pocket transmitters are powered by 3 AA batteries which allows for up to 500h of operation. Its slim but ergonomically designed profile allows for easy single-handed operation. The highly reliable membrane switches are available in single or dual speed. The housing is compact but rugged and several different configuration standards are offered for "off-the-shelf" availability.

#### **Applications:**

Like most Hetronic products, the Pocket series fits a broad variety of applications. It's ideal for chain hoists, small overhead cranes, conveyor systems, monorails, hook loaders, concrete mixers, tow trucks, tailgates and many other machinery. The Pocket transmitters are fully compatible with Hetronic's line of MFSHL receivers.

#### The Technology:

Pocket transmitters are equipped with Hetronic's latest state-of-the-art technology.

### **H-LINK**:

H-LINK is an intuitive and user-friendly software that runs on a PocketPC. It provides remote access to the settings and parameters within the radio remote control. Individual settings are accessed and configured using the PocketPC and then uploaded wirelessly, via the HETRONIC H-LINK modem to the transmitter or receiver. In short: The configuration of a radio remote can be changed or customized from a distance of up to 20 meters (60 ft).

#### MFS:

The MFS feature enables up to 20 transmitters to be operated in close proximity while sharing the same frequency. Therefore, operators don't have to worry about frequency management.

#### About Hetronic:
